

COMPLETE RANGE OF
DIE-CASTED SOLUTIONS FOR

Water pumps

Superior Cleanliness level

High-level Quality Standards

Precision machining process

More than 20 years of experience in producing complete range of pump components for Automotive Applications. Hidria offers unique required set up in developing and producing lightweight parts in Water Pump applications adopting dedicated technical experience and knowledge.

■ State of the art technical expertise

- Low Porosity Level
- Tight Tolerances after machining
- Superior Cleanliness Level
- Leak Test Devices as our core competence

■ State of the art equipment

- Squeeze pin technology on casting
- Robotized Machining Cells
- Dedicated Process Control Equipment
- Highly Efficient Washing Machines.
- State of the art Quality assurance

■ Experienced and dedicated team

- Experienced R&D team
- Internal Certified Laboratory with qualified team
- Project Management team
- Internal Tool Shop with 20 years of experience
- Internal Equipment production
- Skilled Operations Teams

■ Applications

- Water Pumps for EV and HEV
- Oil Pumps for ICE
- Water Pumps for ICE

We are specialist for lightweight components in Automotive Applications with our complete range of WATER PUMP solutions.

Hidria Alutec develops and produces technically complex components for various WATER PUMP applications for hybrid and electro vehicles.

Dedication to details, 20 years of development experience as well as operational excellence brings value to our customers with developing and producing lightweight components for WATER PUMP solutions.
