

Hilma

Fine blanking

Our business is based on close partnerships enabling us to consider our customer's requests and in co-operation with them we develop products to mutual satisfaction.

We offer:

- High quality of products and services
- Highly developed fine-blanking technology
- Optimal tool design, tool production and maintenance during the whole operating period
- Capability of supplying globally
- Highly motivated, dedicated, experienced and educated personnel

Precision

High technology

Hidria Rotomatika carries on fine blanking based on its 25 years of experience. As a member of Hidria Automotive we focus our design and engineering solutions on the demanding automotive component supplier market. Our fine blanked products are used also in furniture industries, industry of power tools and many others.

We use several types of sheet metal of a high-quality class, which together with the high developed fine-blanking technology enables us to produce high precision products. We are specialized in cutting of fine blanked products up to 10 mm thickness.

Optimal tool design, production of tools in our own tool shop and maintenance during the whole die operating period are our main features, while this also ensures highly functional components.

We also perform additional operations such as deburring, milling, drilling, tapping, riveting, belt sanding, heat treatment, colouring, plastification and anti-corrosion protection (zinc-, nickel- and chrome-plating etc.).

Quality management system as one of the most important business elements is being constantly improved. High quality of our products and services stems from our knowledge, experience, technology and co-operation with our customers and institutions. Our strong dedication and efforts are repaid by high rates given by our customers in internal assessments as well by the achieved standards: ISO 9001:2000, ISO 14001:1996 and ISO/TS 16949:2002.
