General stamping

General stamping

The newest technology of general stamping is widening the product range of our products. Different grades of steel and several other types of sheet metals can be stamped and further processed on advanced stamping equipment. We are specialised in cutting and forming products with stamping technology up to 4 mm strip thickness.

Many forms and additional operations are possible using the specific custom made tooling. Different galvanic protections of material surface, including the cathaporetic e-coating are available (black color, thickness from 10 to 25µm)

Our products can be used in different electromechanical equipment, automotive industry and many other applications where high precision and top quality are required.

Maintenance and own tool shop is well organized and shortening the lead time for prototypes and series production.

Quality management system is certified according to ISO 9001:2002; ISO 14001:2004 and ISO/TS 16949:2002.
